**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 63-64 and 72-81, drawn to a scanner having an oscillating support structure for supporting a scanning assembly and an objective lens, classified in class 359, subclass 196+.
  - II. Claims 66-67, drawn to a scanner having a data collection control and processing unit for collecting data in a specific manner of the scanning operation, classified in class 359, subclass 363+.
  - III. Claims 82-89, drawn to a scanner having an oscillating support structure for supporting a scanning assembly and an objective lens, and a data collection control and processing unit for collecting data in a specific manner of the scanning operation, classified in class 359, subclasses 196+ and 363+.
2. Claim 62 link(s) inventions I, II and III. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claim 62. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional

Art Unit: 2872

application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Note: Claims 65 and 68-71 are not directed to the mentioned groups thus these claims will be examined with the linking claim 62 and the claims of the elected group of invention.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions III and (I, II) are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, since claims to both the combination and subcombination are presented and assumed to be patentable, the omission of details of the claimed subcombination in the combination is evidence that the patentability of the combination does not rely on the details of the specific subcombination. The subcombinations II and I have separate utility for use in a scanner without the details/structure of other subcombination.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2872

5. A telephone call was made to Ivan D. Zitkovsky on 7/23/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thong Q. Nguyen whose telephone number is (703) 308-4814. The examiner can normally be reached on M-F.
